All rings are assumed to be associative and to have a non-zero unit. A module  $M$  is called a distributive module if its submodules form a distributive lattice. Semidistributive Modules Rings Tuganbaev Springer Paperback . DOI: 10.1007/978-94-011-5086-6\_8 In book: Semidistributive Modules and Rings, pp.187-208. ABSTRACT. A module  $M$  over a ring  $A$  is endo-distributive if the lattice  $\text{Lat}(M)$  of all its submodules is distributive. Serial and semidistributive modules and rings - ScienceDirect The direct sum of distributive modules is called a semidistributive module. A ring is called normal if all its idempotents are central. A ring of endomorphisms of  $V$  is called distributive if its submodules form a distributive lattice. Examples of left semidistributive rings are distributive rings (called also D-rings). Askar A.
