All rings are assumed to be associative and to have a non-zero unit. A module M is called a distributive module if its submodules form a distributive lattice. Semidistributive Modules Rings Tuganbaev Springer Paperback . DOI: 10.1007/978-94-011-5086-6_8 In book: Semidistributive Modules and Rings, pp.187-208. ABSTRACT. A module M over a ring A is endo-distributive if $M/F \cong (M/F) \oplus (M/H)$ for all submodules F, G , and H of the module M . Serial and semidistributive modules and rings - ScienceDirect The direct sum of distributive modules is called a semidistributive module. A ring is called normal if all its idempotents are central. A ring of endomorphisms of V is called distributive if $(f+g)(V) = f(V) + g(V)$ for all $f, g \in \text{End}(V)$. 0792352092 - Semidistributive Modules and Rings Mathematics . A module is said to be distributive if its submodules form a distributive lattice. Examples of left semidistributive rings are distributive rings (called also D-rings). Askar A.
